Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	- Collects historical monsoon and rainfall data. - Trains ML models like XGBoost, KNN, and Random Forest. - Evaluates model metrics to achieve high accuracy.	- Integrates the trained models into a Flask framework. - Builds the front-end interface using HTML, CSS, and JavaScript. - Deploys the web application to an IBM Cloud account.	- Monitoring the live system for real-time risk tiers. - Inputting current weather parameters to test the live early warnings. - Sharing the web dashboard link with disaster relief teams.
Touchpoint <i>What part of the service do they interact with?</i>	- Python environment - Local datasets - Jupyter Notebook / IDE	- Flask application code - Web browser UI - IBM Cloud console	- Live web app URL - Real-time early warning metrics - Prediction result dashboard
Customer Thought <i>What is the customer thinking?</i>	- Which algorithm will yield the highest classification accuracy? - Is the historical data clean enough for training? - How can I prevent model overfitting?	- Will the Flask web application connect seamlessly with the ML backend? - Is the cloud server running stably? - Is the UI simple enough for emergency teams to navigate?	- Are the real-time warnings generating instantly? - Can regional disaster coordinators access this link without lag? - Will this reliably help teams schedule earlier evacuations?
Customer Feeling <i>What is the customer feeling?</i>	Focused but slightly anxious about accuracy benchmarks.	Relieved to see it deployed, yet cautious about server stability.	Are the real-time warnings generating instantly? Can regional disaster coordinators access this link without lag? Will this reliably help teams schedule earlier evacuations?

Process Ownership <i>Who is in the lead on this?</i>	Shaik Reshma	Shaik Reshma	Shaik Reshma
Opportunities <i>How can we improve this stage?</i>	- Automate data preprocessing to save development time. - Use ensemble methods to blend model strengths.	- Implement lightweight web dependencies for faster cloud page loading. - Set up automatic error logging on IBM Cloud.	- Add automated email or SMS notifications for severe hazard tiers. - Expand data streaming inputs to handle broader geographic regions.
