Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • Traditional tools are too slow; I need a faster system. • Every minute matters; accuracy is a must. • I need reliable, real-time risk tiers to issue evacuation orders.	THINKS • Monsoon changes are too rapid; can manual methods keep up? • Missing an alarm could be catastrophic for thousands. • Is this system genuinely scalable for large regions?
PERSONA NAME (Role / User Type)	
DOES • Monitors multiple risk indicators simultaneously (rainfall, visibility). • Integrates historical weather data for model training and verification. • Coordinates with field teams for physical deployment plan	FEELS • Concerned about public safety and timely resource allocation. • Determined to reduce false alarms and increase system trust. • Anxious about missing subtle, rapid monsoon pattern shifts.

Shaik Reshma, Lead System Engineer
